Inflation is the general increase in the price level of goods and services in an economy over a period of time, leading to a decline in the purchasing power of money. The main causes of inflation include:

- Demand-pull inflation: Occurs when aggregate demand exceeds aggregate supply, often due to increased consumer spending, investment, or government expenditure.
- Cost-push inflation: Results from rising production costs, such as increased wages or raw material prices, which lead producers to raise prices.
- Built-in inflation: Also known as wage-price inflation, it happens when workers demand higher wages, and firms pass these costs to consumers, creating a wage-price spiral.

Question 2: Discuss the role of the Central Bank in controlling inflation.

Model Answer:

The Central Bank plays a vital role in maintaining price stability by controlling inflation through monetary policy tools such as:

- Adjusting interest rates: Raising the discount rate makes borrowing more expensive, reducing money supply and curbing inflation.

- Open market operations: Selling government securities to absorb excess liquidity from the banking system.
- Reserve requirements: Increasing reserve ratios limits the amount banks can lend, reducing money creation.
